

# iBuy Release 15.1 Functionality Changes

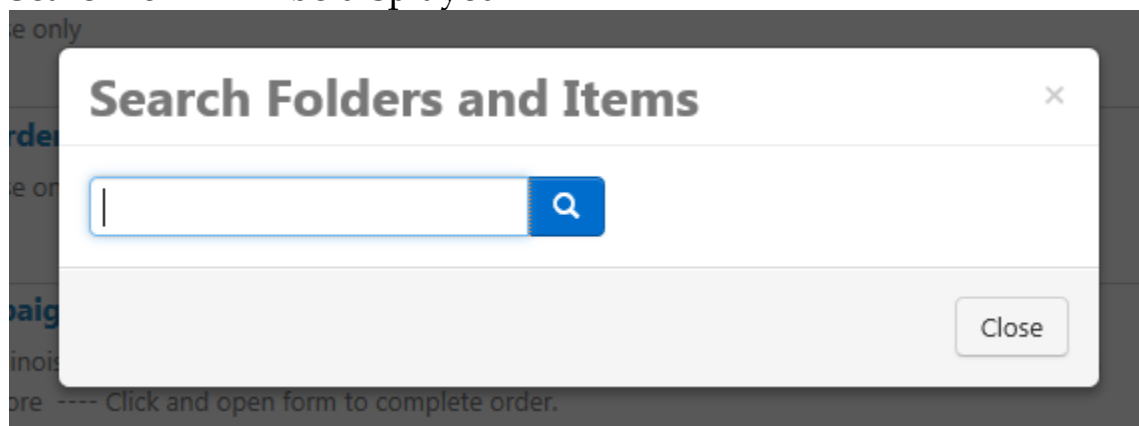

- Shopping Favorites User Interface Updates
  - In 15.1, the current interface for Favorites management will be updated. In the current interface, most actions are accessed through a series of buttons or links. The updated interface will roll those actions in to more intuitive drop-down menus (see red box). For example, in previous versions, the Edit, Move, Copy and Delete actions are separate links. In 15.1, those actions will all be accessible from an Available Actions drop-down menu, similar to other areas in the application. The Available Actions drop-down menu will allow you to perform an action on multiple favorites (see red arrow).

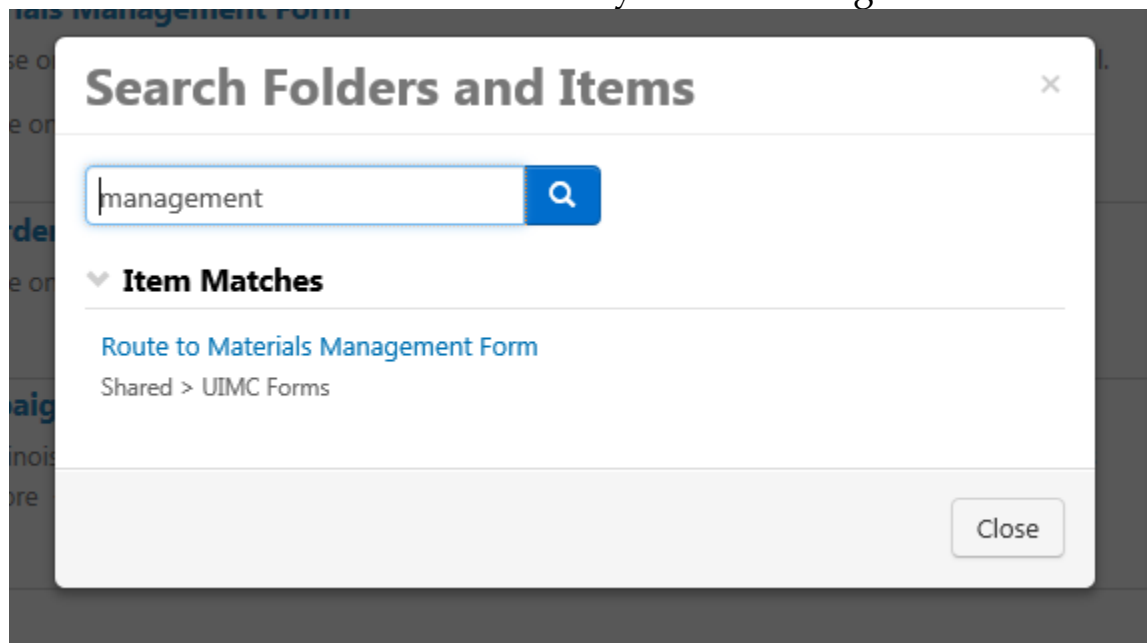

- Ability to Search Shopping Favorites in Favorites Management
  - In 15.1, users will have the ability to search Favorites and Favorites folders. This is useful when there are a large amount of Favorites/folders saved. Users with permission to view and use personal favorites will be able to search personal folders. Users with permissions to view shared folders or who have access to specific shared folder, will be able to search on those folders. Clicking on an item in the search results will take the user directly to the favorite or folder.

Search form will be displayed

Enter search terms to find the folder you are looking for

Select the desired form from the results
